Stephen Sutter
Special Projects Manager
Post Production Engineering
Sound Department

The Post Production group at 20th Century Fox utilized the services of Media Vision Integration for a series of technical integration projects on the lot in Los Angeles. Specifically MVI was used for the complete systems design and integration of the Little Theater Screening Room and the William Fox Theater. In addition, MVI was the systems integrator for the screening systems in the Fox's new Post Production complex. These were all projects that had each total budgets including all architecture, consulting, building construction, equipment, and systems integration in the range of millions of dollars

I am glad to report that we were extremely happy with the work as provided by MVI. They were very easy to work with as well as being very technically competent even on these projects that involved a good deal of leading edge digital technology. The design process was handled smoothly even involving a large cast of engineers, architects, executives, and project managers. They produced extremely high quality documentation and the end product was of very clean professional standards with all the appropriate details handled without question. We would have no issues with using them again on future projects.

I am happy to recommend them for any media systems technical project design and integration.

Regards,

Stephen Sutter
Technical Project Manager
